Key words: Discovery, Publishers, Springer Nature, Nature Masterclasses, Bookmetrix, SharedIt, data support

Springer Nature is a global publisher that creates value across the academic publishing process, providing the best possible service to the whole research community to advance discovery.

We support librarians and researchers with innovations in technology and data and provide quality publishing support to academic societies.

To support the community we:

1. **Develop Knowledge:** We help researchers uncover new ideas and findings and apply them in their thinking and collaborations to drive new discoveries.
2. **Qualify and Enhance:** We make sure all research we publish is significant, robust and stands up to scrutiny
3. **Produce and Distribute:** We ensure the necessary rights and permissions are in place, that the research is presented in the best way, using the most suitable formats and newest technologies, and that it reaches all relevant audiences.
4. **Share and Amplify:** We make sure our articles, books, databases and solutions can be discovered, accessed, understood, used, re-used and shared, to act as a springboard for new discoveries.

In this session, we present specific examples of how Springer Nature creates value across the academic publishing process. These include Nature Masterclasses, Bookmetrix, Springer Nature's research data support service, SharedIt, and Springer Nature's Grand Societal Challenges program.
